

## **Minerva at a glance**

Minerva Neurosciences is developing a portfolio of product candidates to treat patients suffering from central nervous system (CNS) diseases. This portfolio includes four compounds with mechanisms of action that we believe are first-in-class.

Our mission is to develop differentiated therapies that address significant unmet needs in the treatment of schizophrenia, insomnia, major depressive disorder and Parkinson's disease. Toward that end, we are applying the knowledge, insights and expertise that our team has accumulated over more than 30 years working in clinical facilities and on pre-clinical and clinical research projects.

We are driven by the recognition of the profound human impact, extensive demographic reach and serious financial burden of the diseases we are targeting, and we invite you to visit our website at [www.minervaneurosciences.com](http://www.minervaneurosciences.com) to learn more about our ongoing efforts in the field of central nervous system disorders.
